Got enough—

GRAIN STORAGE

Have you checked your storage needs?

Harvesttime may be too late—especially this year when we face new alltime record totals of grain and oilseeds.

WITHOUT ADEQUATE STORAGE—

You may have to dump your grain on a seasonally low market at harvesttime.

You will not be in position to take out price-support loans.

WITH ADEQUATE STORAGE—

You can hold your grain for better prices, marketing in an orderly way.

You can take full advantage of the price-support programs.

Check now.—Act at once to buy or build needed storage on your farm; otherwise be assured of enough commercial elevator space.

Manufactured units are available at reasonable cost. Building plans and specifications are also available. Government aids will help with financing —————→

STORAGE PAYS OFF

GOVERNMENT HELP

Farm Storage Facility Loans.—Farmers can borrow a large part of the cost of new grain storage structures which meet the standards for price-support loan storage. Repayment of the loans is in 4 annual installments, at 4 percent interest.

Storage Equipment Loans.—Available to help purchase drying and ventilating equipment to cure and dry grain. Loans repayable in 3 annual installments, at 4 percent interest.

Reseal Storage Payments.—Farmers who reseal grain stocks which are already under price-support loan, and hold the grain on the farm for another loan period, earn special storage payments, as follows: corn, 15¢ a bushel; barley, 15¢ a bushel; oats, 11¢ a bushel; flaxseed, 16¢ a bushel; and varying by States—wheat, 13 to 15¢ a bushel; rye, 14 to 16¢ a bushel; grain sorghums, 26 to 28¢ per hundredweight. These payments are about the same as regular elevator storage rates.

Tax Amortization.—Federal income tax laws now permit a farmer to charge off for tax purposes the entire cost of new farm storage structures in a 5-year period, instead of over the normal life of the building.
